

# The “Allflex eList” app

Available for  
android and iOS

Go to the iOS “App Store”  
or android “Play Store” and  
search for “Allflex eList”  
then look for our app logo!

Animal Intelligence, for Life™

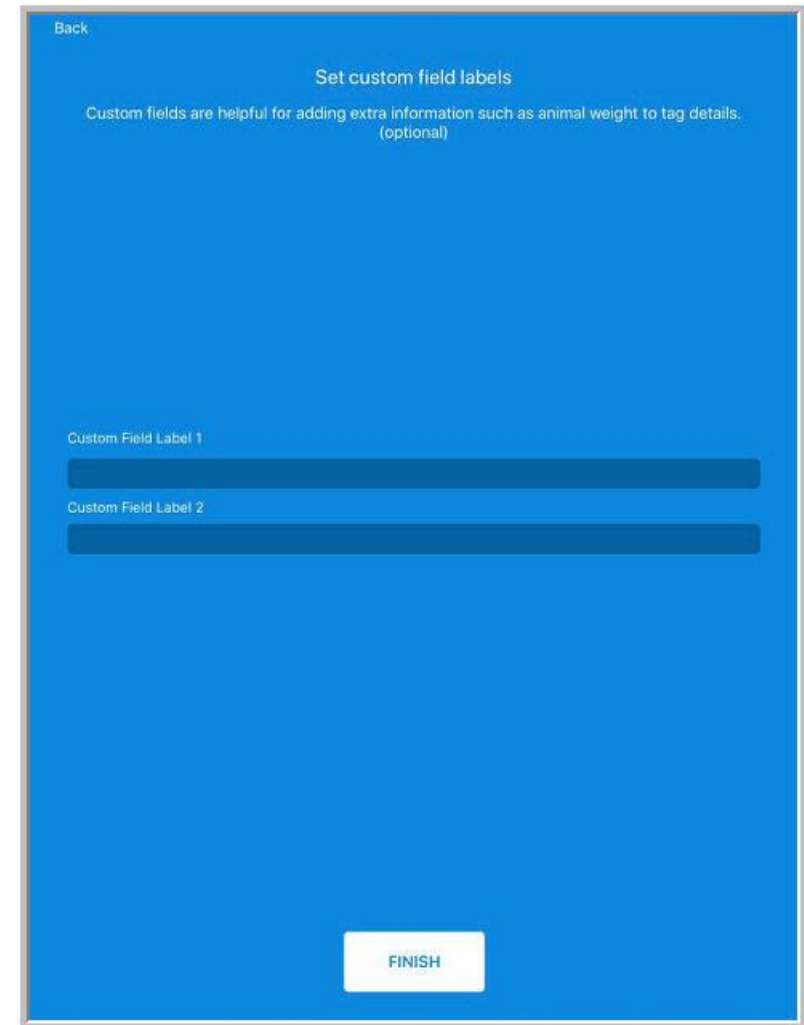

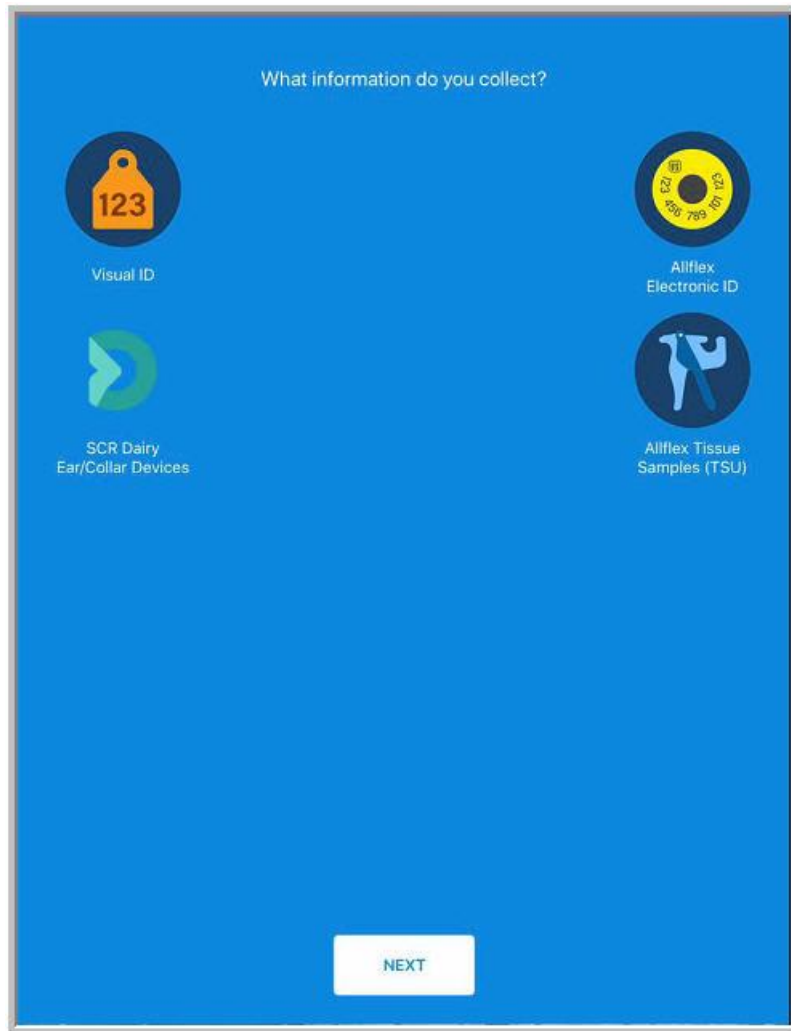

# The Allflex eList app can create lists containing any or all of the following:

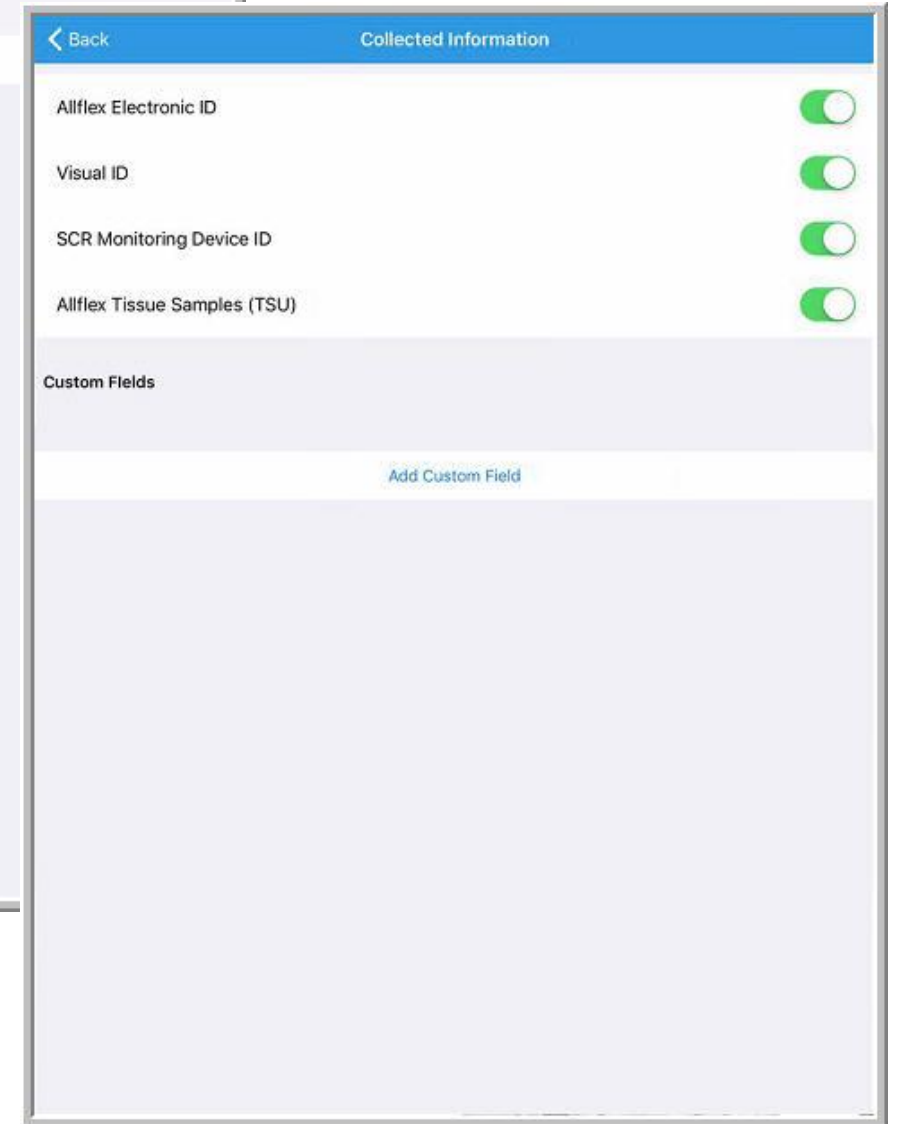

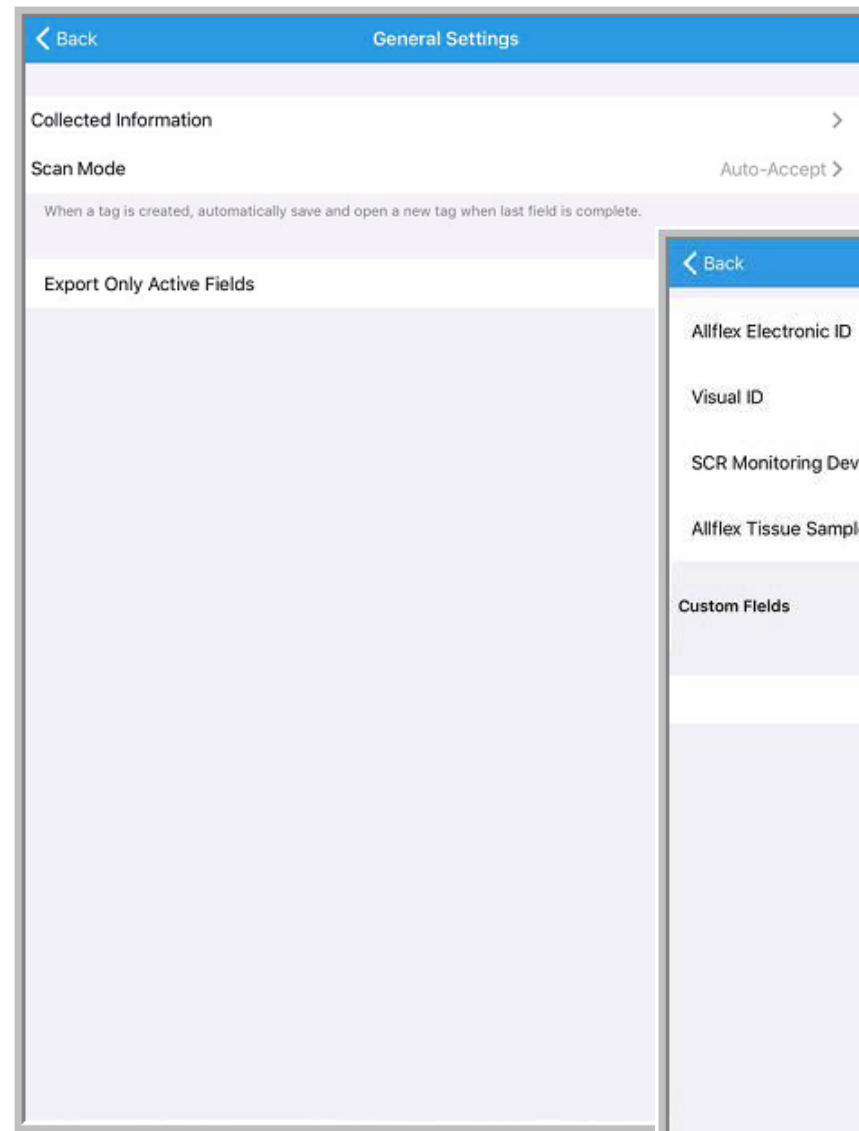

- EID
- Visual ID
- Tissue sample unit information
- SCR device ID
- Up to two user-defined fields

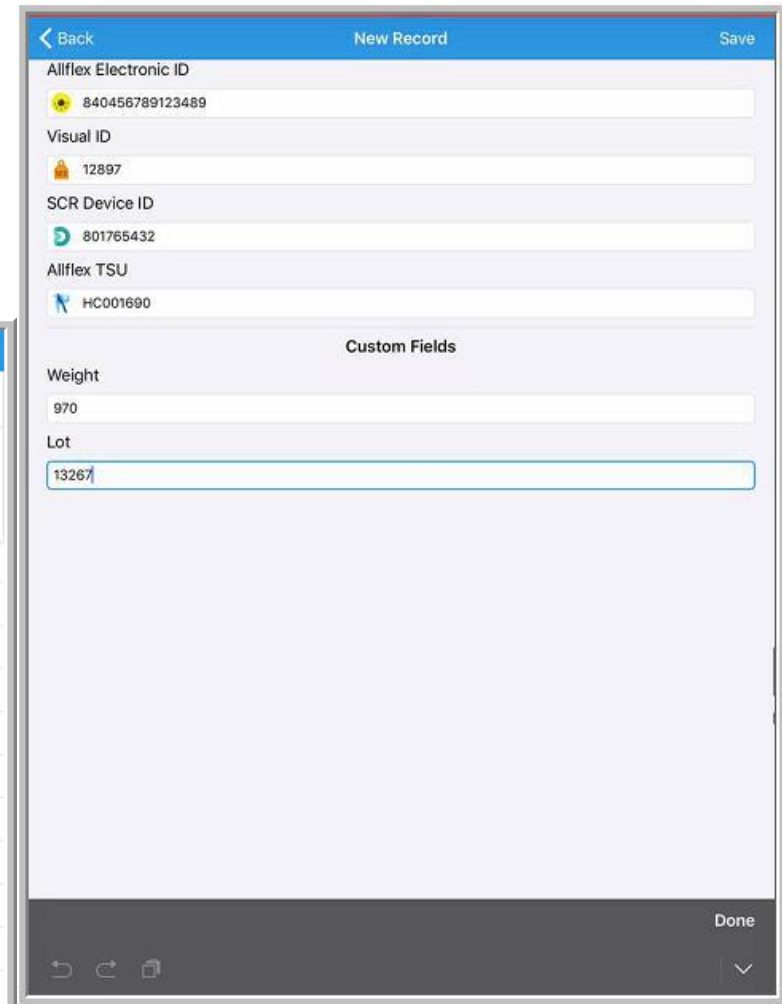

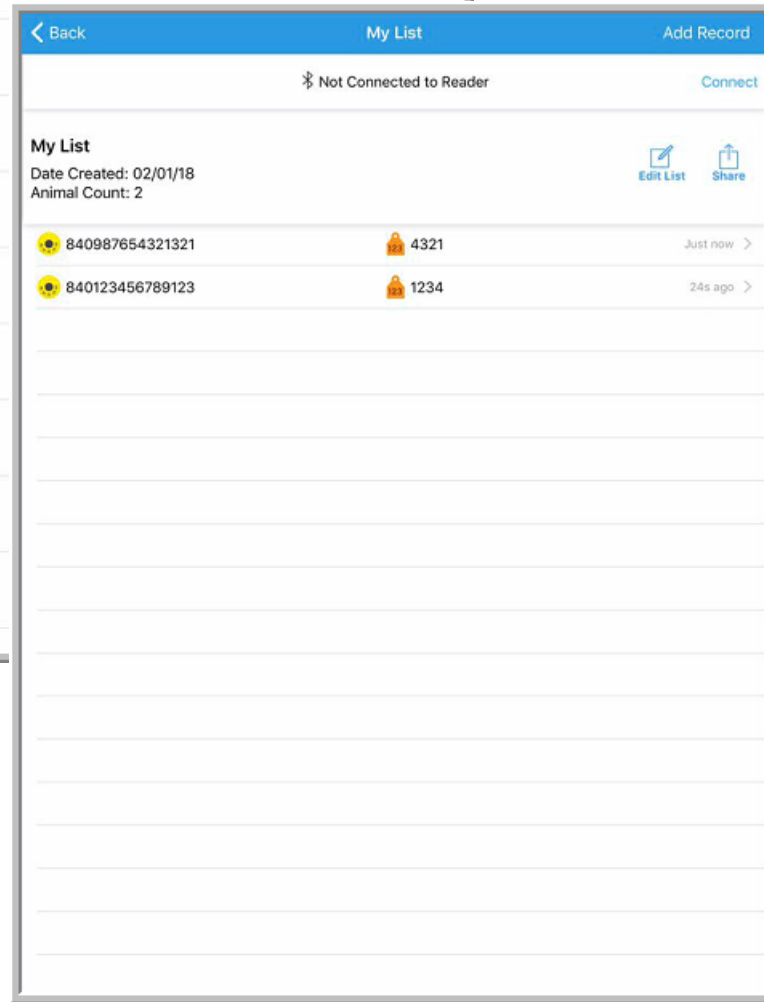

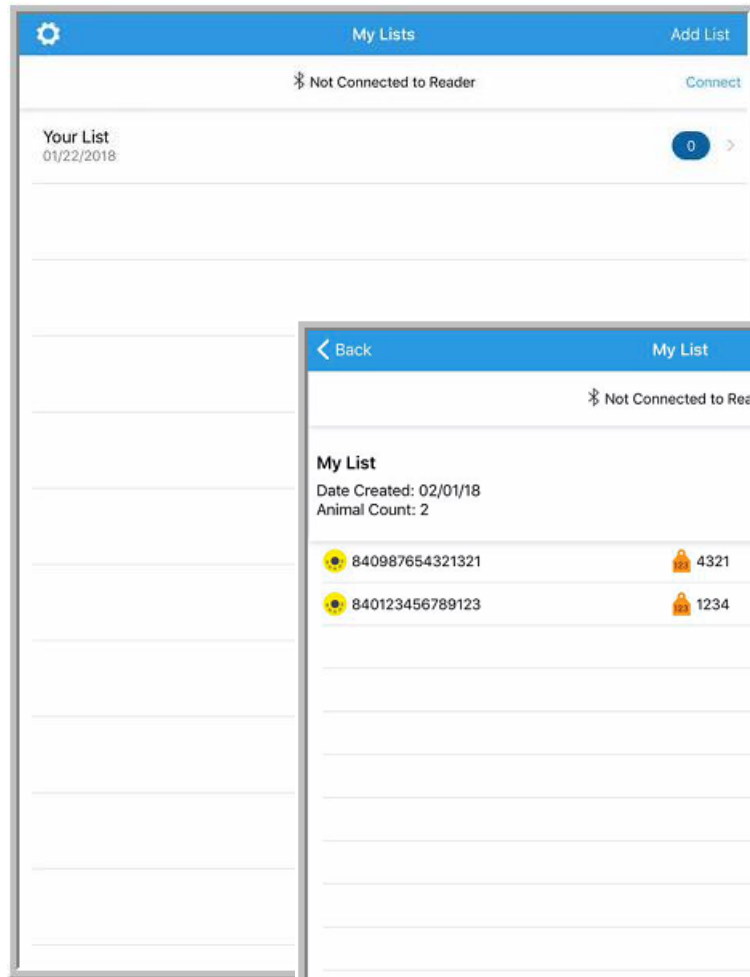

The app has a walkthrough to help users with setup or to change information to be collected.

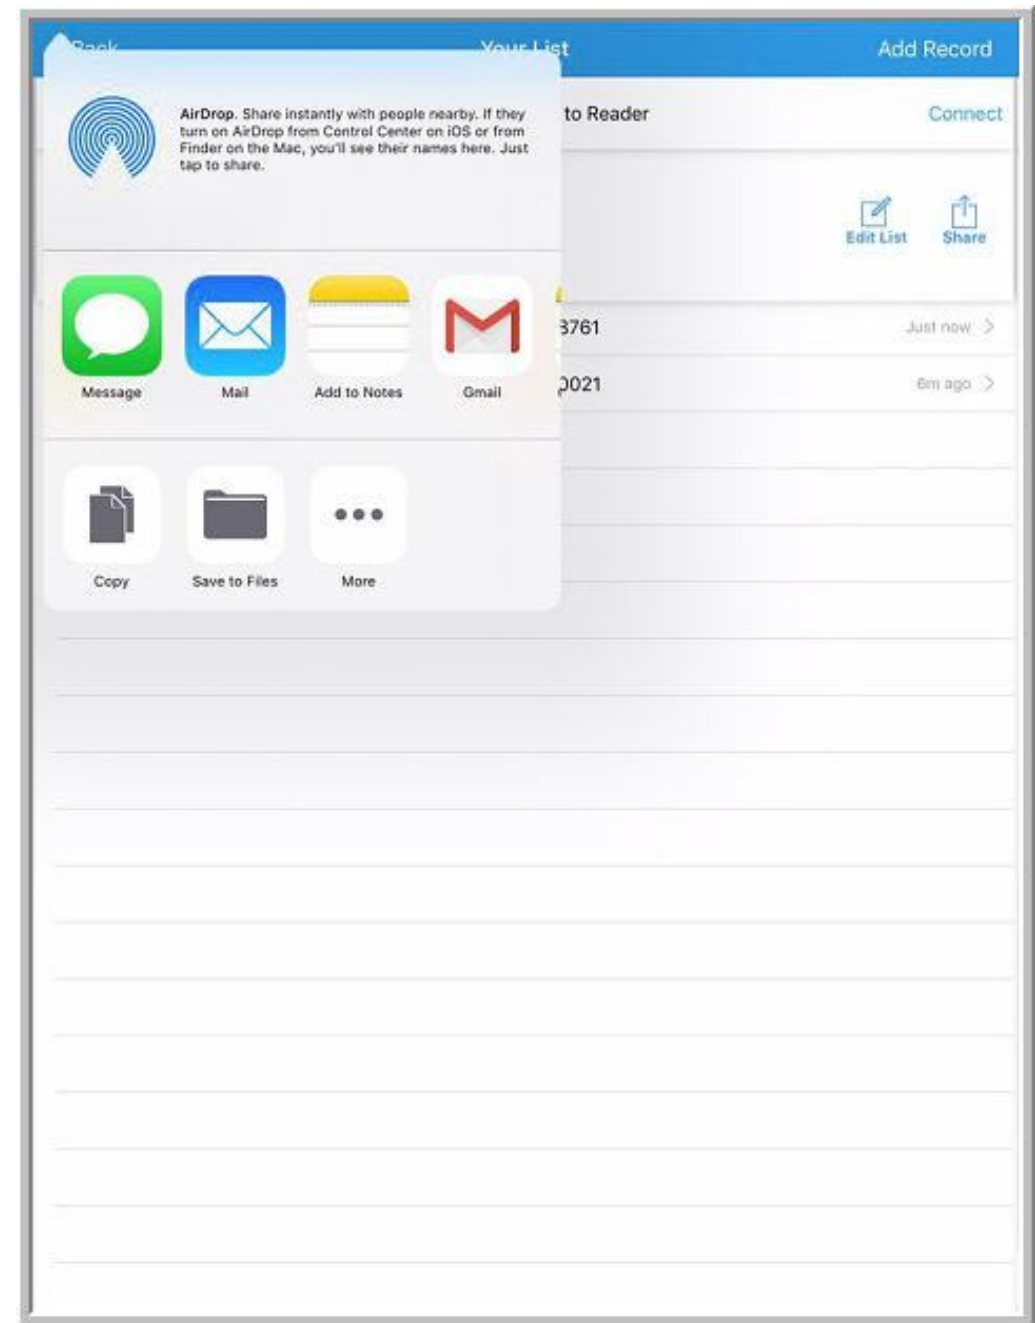

In settings, items to collect and other options can also be changed.

The app can save multiple lists, any one of which can be selected for additions, editing, or deletion.

Lists are saved as comma separated value (csv) files and can be shared by email, text, etc.

The Allflex eList app will work with Allflex LPR and RS420 readers.

It will support EID tags with prefixes of 840, 124, 960, 982, or 985.

Each EID must be unique in any list.

The app will also support data collection from other compatible Bluetooth devices such as scales, barcode readers, etc.
